EXPERIENCE

7th Ave, Remote — Software Engineer

June 2021 - November 2022

- Contributed to microservices architecture by developing various back-end solutions
- Improved user experience by building an API gateway with GraphQL and Apollo Server for login and registration functionality
- Leveraged React Native to build user interfaces for the iPhone application
- Streamlined business operations by creating an internal tool with the MERN stack
- Developed a NestJS-based API that enabled effective tracking of analytic data for users on the platform
- Collaborated in the creation of an NFT promotion website using Next.js

Apple, Norfolk/New York City/Sarasota — Genius

September 2016 - September 2022

- Achieved 100% customer satisfaction rating for 5 consecutive quarters in Norfolk and New York stores
- Managed the Genius Bar and all technicians to ensure that appointments were running on time
- Explained technical concepts to customers in non-technical jargon

EDUCATION

General Assembly, Remote — Full Stack Software Engineering

October 2020 - April 2021

Old Dominion University, Norfolk, VA — BS in Communications

September 2011 - May 2015

SKILLS

React, HTML, CSS, JavaScript, Node.js, Express, MongoDB, Next.js, NestJS, Ethers.js, Tailwind CSS, Solidity, Puppeteer, React Native, GraphQL

PROJECTS

[Portfolio](#) - A website built with Next.js and Tailwind CSS

[Mint My Photos on the Blockchain](#) - A project built with React. The repository contains a smart contract written in Solidity and compiled/deployed using Hardhat on the Goerli testnet. The site displays a link to the smart contract on Etherscan. Users can connect their wallet to the site, mint one of my photos as an NFT and view the collection on the OpenSea testnet.

[Personal Photo Blog](#) - Built with React and NestJS/Typescript. The website showcases photos I've taken. It features a tumblr-esque design with light and dark mode themes.
